

Radiance Shower Base Heating System

Radiance® is a thermal therapy innovation from MTI that applies radiant heat technology to Designer Collection shower bases, also available for most MTI Designer Collection tub models. Factory-installed and fully integrated, Radiance warms the main area of the shower floor on all eligible bases. Shower bases with integral seating may be equipped to heat the surface of the seat and the floor.

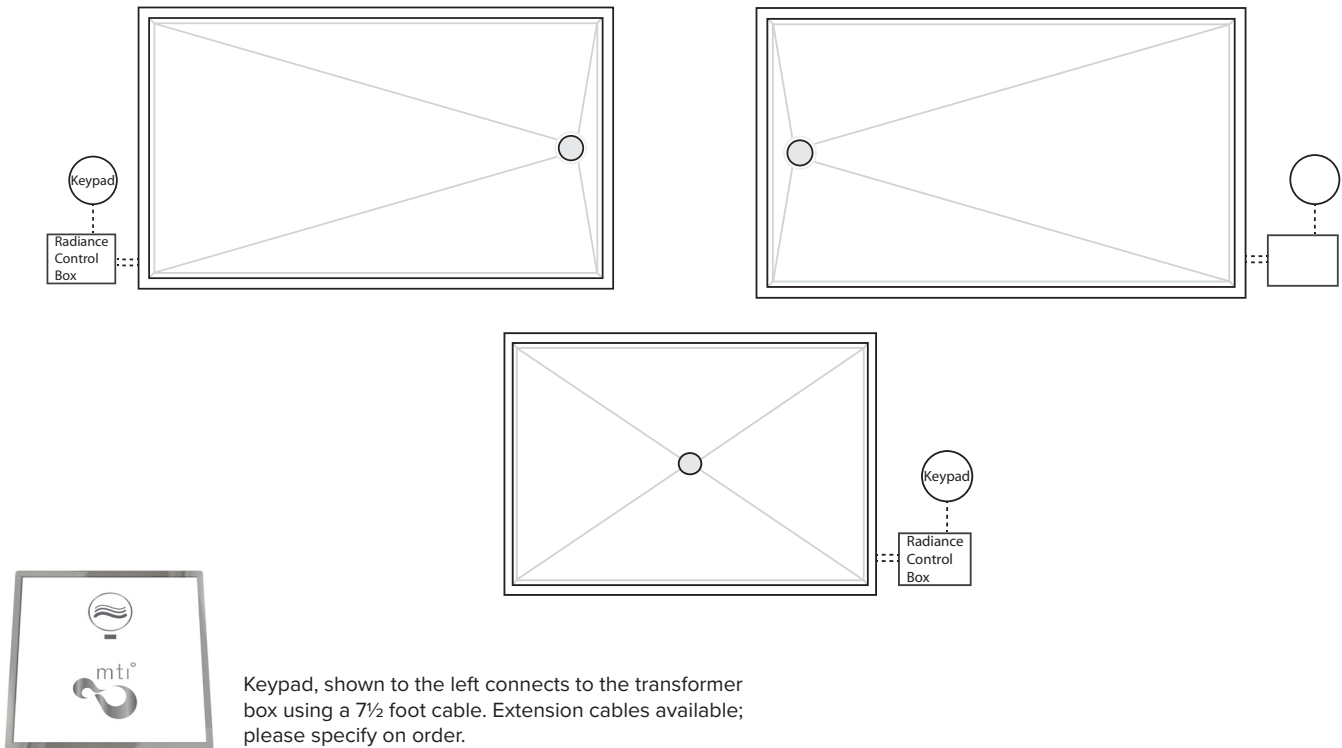

Radiance utilizes electric heating grids to provide radiant heat for the shower base surface. Since Radiance uses only about as much energy as a standard light bulb, leaving it on will ensure a warm shower base whenever the owner chooses to shower.

The on/off device and transformer box will ship loose with most shower bases for field installation. These components will be factory-installed on seated shower bases. The transformer box will need to be accessible for any future service needs. See Designer Collection Shower Base Installation Instructions for more details.

Radiance® (RAD100) \$1,595
Must be ordered with shower base

Shown below is standard placement of the Radiance transformer box wire leads based on drain location. The outer edge of the shower base will be notched out at the factory to accommodate connection from the Radiance heating grids to the transformer box. Transformer box can be mounted up to 6' away. A drawing must be submitted with order to specify alternate placement.

Keypad, shown to the left connects to the transformer box using a 7½ foot cable. Extension cables available; please specify on order.

ELECTRICAL COMPONENTS & SPECIFICATIONS
Required Electrical Service

110 Volt	GFCI 1-15 amp	5 amps
----------	---------------	--------
