LEARNING OBJECTIVES

KNOWLEDGE & UNDERSTANDING

Students will be able to:

- Identify the different types of cells and their functions.
- Explain the process of photosynthesis and its importance.
- Describe the structure and function of the human digestive system.

- Understand the role of the immune system in protecting the body from disease.
- Explain the process of cell division and its significance.
- Describe the structure and function of the human circulatory system.

- Understand the role of the nervous system in controlling the body.
- Explain the process of growth and development.
- Describe the structure and function of the human reproductive system.

- Understand the role of the endocrine system in regulating the body.
- Explain the process of aging and its effects on the body.
- Describe the structure and function of the human excretory system.

- Understand the role of the human eye in vision.
- Explain the process of hearing and its importance.
- Describe the structure and function of the human ear.

- Understand the role of the human brain in thinking and memory.
- Explain the process of learning and its importance.
- Describe the structure and function of the human brain.

- Identify the different types of cells and their functions.
- Explain the process of photosynthesis and its importance.
- Describe the structure and function of the human digestive system.

- Understand the role of the immune system in protecting the body from disease.
- Explain the process of cell division and its significance.
- Describe the structure and function of the human circulatory system.

- Understand the role of the nervous system in controlling the body.
- Explain the process of growth and development.
- Describe the structure and function of the human reproductive system.
