Multiple Choice Reading

Read the passage.

For 100 years, the world has been using the same system of measurement. The metric system is the most common system of measurement in the world. It is used in most countries, including the United States.

The metric system is based on the meter, the unit of length. The meter is defined as the distance between two points on the Earth's surface. The meter is divided into 100 centimeters. The centimeter is the unit of length used in most countries.

The metric system is also used in the United States. The United States uses the metric system for most scientific and technical measurements. The metric system is also used in the United States for most everyday measurements.

Which of the following is NOT a unit of length in the metric system?

- A. meter
